## 2020_2 EXAMINATIONS

| COURSE CODE: | PHY 314 |
| :--- | :--- |
| COURSE TITLE: | NUMERICAL COMPUTATIONS |
| CREDIT UNIT: | 2 |
| TIME ALLOWED: | (2 HRS) |
| INSTRUCTION: | Answer question 1 and any other three questions |
| QUESTION 1 |  |

(a) Differentiate between exact numbers and approximate numbers.
(4 marks)
(b). List three effective rules that are used to recognize and handling significant digits ( $\mathbf{3}$ marks)
(c). An approximate value of $\pi$ is given by $\mathrm{x}_{1}=22 / 7=3.1428571$ and its true value is $\mathrm{x}=$
3.1415926. Find (i) the absolute error and (ii) the relative error
(4 marks)
(d). Assume a given table of values $\left(\mathrm{x}_{\mathrm{i}}, \mathrm{y}_{\mathrm{i}}\right), \mathrm{i}=0,1,2 \ldots \ldots \mathrm{n}$ for a given function $y=f(x)$, briefly discuss the three types of finite differences known and state their individual first difference operator.
(e). Mention four methods of solving a first order ordinary differential equation. (4 marks)
(f). List four types of operator that are usually employed in C++ programming(4 marks)

## QUESTION 2

| (a). Define arithmetic precision | (2 marks) |
| :--- | :--- |
| (b) (i) List four types of errors encountered in numerical computations | (4 marks) |
| (ii) Discuss any three of them | (9 marks) |

## QUESTION 3

(a). Find the difference $\sqrt{6.37}-\sqrt{6.36}$ to three significant figures
(b).What is interpolation?
(c). (i) Find the absolute and relative errors when the exact answer and the computed answer in an experiment are respectively $\mathrm{A}=20.138$ and $\bar{A}=20.125$.
(ii) Show that the Shift operator is given as $\mathrm{E}=1+\Delta$

## QUESTION 4

(a). If $\mathrm{y}=\mathrm{a}(3)^{\mathrm{x}}+\mathrm{b}(-2)^{\mathrm{x}}$ and $\mathrm{h}=1$, prove that $\left(\Delta^{2}+\Delta-6\right) \mathrm{y}=0$
(b). Using the Trapezoidal rule, find from the table below, the area bounded by the curve and the x -axis from $\mathrm{x}=7.47$ to $\mathrm{x}=7.52$

| $\boldsymbol{x}$ | $\boldsymbol{f ( x )}$ |
| :---: | :--- |
| 7.47 | 1.93 |
| 7.48 | 1.95 |
| 7.49 | 1.98 |
| 7.50 | 2.01 |
| 7.51 | 2.03 |
| 7.52 | 2.06 |

## QUESTION 5

(a). Find the missing $\mathrm{y}_{\mathrm{x}}$ values from the first differences provided:
(11 marks)

| $\mathrm{y}_{\mathrm{x}}$ | 0 | - | - | - | - | - |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\Delta \mathrm{y}_{\mathrm{x}}$ | 0 | 1 | 2 | 4 | 7 | 11 |

(b). Consider the first order differential equation $\frac{d y}{d x}=f(x, y)$ with initial boundary conditions $y\left(x_{0}\right)=y_{0}$, differentiate between initial value problems andboundary value problems.
